

# where EXPERIENTIAL meets ASSESSMENT meets CURRICULUM... CORETRAX

CoreTrax is an intuitive application merging power with simplicity to integrate and automate experiential planning, curriculum and assessment.

## WHY CORETRAX?

CoreTrax, like most academic planning software, features the expected functionality: managing sites, creating rotations, tracking requirements, assessing progress, sharing portfolios, mapping competencies, outlining curriculum, assigning coursework, and so on. The difference? *Execution*. But of course we'd say that. Therefore, we invite you to see for yourself and draw your own conclusion. This document will introduce you to the expected features as well as some others. However, one piece of paper can only tell so much; please allow us the opportunity to demonstrate the CoreTrax difference. Contact us at [info@coretrax.net](mailto:info@coretrax.net).

## FEATURE OVERVIEW

Each feature is coded to show the integration and overlap between experiential, assessment, and curriculum.

● EXPERIENTIAL      ● ASSESSMENT      ● CURRICULUM

### What you'd expect...

- Organize sites & rotations
- Organize students & preceptors
- Optional anonymous evaluations
- Billing/ invoicing system
- Optional preceptor availability entry
- Program design for APPEs and IPPEs
- Student hour tracking
- Cloud file system
- Customizable Evaluations
- Use past evaluation as starting point
- Graduation requirement tracking
- Rotation scheduling spin
- Site visit and evaluation tracking
- Site contract maintenance
- Absence tracking
- Integrated competencies
- Portfolio tools
- Site Admin access
- Direct to excel data
- Responsive application interface
- Reminder emails
- Reporting & analysis tools
- View competency progress
- Track student experiences
- Manage courses and coursework
- Create rubrics
- Assign course administrators
- System graded questionnaires
- Upload files as coursework

### ...and more.

- **Expanded spin parameters and settings**  
i.e. students need one rotation of a specific type, and some students get priority  
i.e. a site takes 8 students total, offers 4 rotations with 20 spots total- the spin can handle it
- **Extensive use of geocodes**  
i.e. you want to search for all rotations within 5 miles of your house, and then map it in current traffic.
- **Automated invoicing**  
i.e. a preceptor wants single click payment request  
i.e. on the final day of the rotation a payment request should automatically generate
- **Flexible user permissions**  
i.e. you need a user who can grade but not create or assign coursework, like a teaching assistant
- **There's an App for that**  
i.e. student needs to upload a scan of his background check- simply take picture from the CoreTrax app (iOS & Android)
- **Integrated todo list**  
i.e. you just want one place to see everything requiring attention- and a quick link to that task
- **Rotation trading**  
i.e. you want to allow students to trade and view available rotations after assignments
- **Competency Map w/ analysis**  
i.e. you need a summary of how a student is doing with a competency across all evaluations, coursework and experiences, with graphs, timelines, and metrics
- **Experience Event Tracking**  
i.e. a student is required to dose vanco and gent- at a specific level of competency and document this with the preceptor
